Dobre Praktyki Informacyjne

Investment funds managed by Generali Investments TFI meet the Best Disclosure Practice of the Chamber of Funds and Assets Managements and Analizy Online.

About the Sub-fund

- The sub-fund composed of at least 20% but no more than 80% of equity instruments. The remaining part of the assets consists of debt instruments.
- The equity portion is composed mainly of the stocks of Polish issuers. An actively managed shareholding of large companies to small and mid-sized companies.
- The portfolio is rounded by stocks of carefully selected foreign companies, mainly from developed markets.
- The debt portion which has a stabilising role consists of bonds issued or guaranteed by the State Treasury and securities issued by foreign governments from Central and European countries, among others, and a minor share of corporate bonds.
- The proportions of equity and debt securities in the sub-fund assets are determined on the basis of the current market situation and its outlook.

The sub-fund also has the possibility of investing funds in investment categories other than the ones defined above. A full description of the investment policy is set out in the Fund's articles of association which are available at www.generali-investments.pl, tab: Documents.

The presented risk index is based on the Key Information Document. It is a general risk index showing the level of risk assumed by a unit holder when investing in this product. The index may help assess the risk levels of a sub-fund as compared to investing in other products. The risk index consists of two parameters: market risk and credit risk. The index value may change. Even the lowest risk category does not mean that a given sub-fund is risk-free. The index does not include, among others: liquidity risk, currency risk, business partner risk, operational risk, sustainability risk or financial technique risk. A detailed description of risks associated with investing in a given sub-fund may be found in the Prospectus available on www.generali-investments.pl

Definitions

Beta to benchmark - this ratio shows the relation between changes in the value of a fund unit and the benchmark. Beta of 1 means that changes in the value of a fund unit are the same as of the benchmark, which suggests that the composition of instruments in the fund is the same as the composition of instruments in the benchmark. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of a fund unit by less than 1%. Beta over 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

Duration – this ratio shows the change in the value of the debt part of the fund in reaction to a change in interest rates. The higher the duration, the bigger effect of a change in interest rates on a change in the value of a fund unit i.e. the higher the risk connected with the same.

Information ratio – this ratio shows the profitability of risk borne by the fund compared to its benchmark. The higher the information ratio, the lower the risk at which the return of the fund is generated compared to the benchmark. The fund with the information ratio over 0.3 is considered as effectively managed.

YTM – (yield to maturity) – this ratio shows the rate of return that investors obtain when buying a bond at the current market price and holding it in their portfolio until maturity.

Standard deviation – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).
