The sub-fund management takes into account issues relating to sustainable growth in terms of environment, society and governance.

**Dobre Praktyki
Informacyjne**

Investment funds managed by Generali Investments TFI meet the Best Disclosure Practice of the Chamber of Funds and Assets Managements and Anality Online.

About the Sub-fund

- The sub-fund invests mainly in debt securities issued by companies from Poland or Central and Eastern Europe.
- Lower sensitivity to interest rate changes due to the dominant share of bonds in the portfolio whose term to maturity is under 397 days or whose interest rate is fixed for periods not longer than 397 days.
- A considerable component of bonds issued or guaranteed by the State Treasury.
- The rules and investment limitations for closed-end investment funds apply.
- Striving to hedge against the FX risk.

The sub-fund also has the possibility of investing funds in investment categories other than the ones defined above. A full description of the investment policy is set out in the Fund's articles of association which are available at www.generali-investments.pl, tab: Documents.

Risk level

The presented risk index is based on the Key Information Document. It is a general risk index showing the level of risk assumed by a unit holder when investing in this product. The index may help assess the risk levels of a sub-fund as compared to investing in other products. The risk index consists of two parameters: market risk and credit risk. The index value may change. Even the lowest risk category does not mean that a given sub-fund is risk-free. The index does not include, among others: liquidity risk, currency risk, business partner risk, operational risk, sustainability risk or financial technique risk. A detailed description of risks associated with investing in a given sub-fund may be found in the Prospectus available on www.generali-investments.pl

Definitions

Duration – this ratio shows the change in the value of the debt part of the fund in reaction to a change in interest rates. The higher the duration, the bigger effect of a change in interest rates on a change in the value of a fund unit i.e. the higher the risk connected with the same.

YTM – (yield to maturity) – this ratio shows the rate of return that investors obtain when buying a bond at the current market price and holding it in their portfolio until maturity.

Standard deviation – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

Sharpe's ratio – this ratio shows the profitability of risk borne by the fund compared to safe investments (e.g. treasury bonds). The higher the Sharpe's ratio, the lower the risk at which the return of the fund is generated compared to safe investments.
